**No, I don't give a shit about  
formatting. ;)**

**The full/paid versions of the apps mentioned below will be available  
(sooner or later) in a MEGA/Mediafire/Drive folder. Please don't  
waste your money on overpriced software (derived from open source  
code) for an open source platform.**

Yes, you can use Retroarch if you want a terrible piece of shit solution.  
Seriously, spare yourself. It's good for nothing.  
And the devs are massive stuck-up cunts anyway.

**F = Entirely free with no ads, \$ = Has a paid version**

**! = Free, with ads, M = Multiplayer available**

**Links are to the free versions if available!**

**To get rid of the ads download and install [Adguard](#) (link to paid, cracked version) and activate it before launching an emulator. This gets rid of the ads**

in every Android app (and browser) for as long as you keep it activated.

**Recommended settings (don't touch anything unless specified) for:**

Drastic:

1. Enable "High-Resolution 3D Rendering"
2. Enable "Multi-Threaded 3D Rendering"

Optional: Enable a filter. FXAA, FXAA HQ and Scale2X work best. Disable if performance suffers.

PPSSPP:

1. Switch to "Vulkan" as a backend.

Optional: Cheats: [Download](#) Place it in PSP/Cheats, then enable Cheats under the "System" tab. You will now see a "Cheats" option in the emulator's menu while running a game, simply press it, press "Import from cheat.db" then press the "Cheats" option again and you should see all the available cheats.
